The Slideshow developer has excellent tutorials and documentation on their website.

Just scan the following QR codes to get direct access: <https://slideshow.digital/>

Tutorial	Documentation	YouTube Videos
		
A quick start to get up and going with the Advanced Player	Complete manual that deep dives to the ins and outs of all the capabilities	Dedicated YouTube channel that has a number of videos

Support for many different file formats

Slideshow can display various **image** (JPG, PNG, BMP, GIF, WEBP, SVG), **video** (AVI, MPEG, MP4, MOV, WMV, MKV) and **audio** formats (MP3, AAC, FLAC, WAV, OGG, MID). Additionally, it supports displaying **text** (TXT), **Excel** (XLS, XLSX), **PDF**, **HTML** files and **YouTube** videos without any need for additional setup or external service.

[More information...](#)

Add new files via USB, Web interface, FTP, WebDav, Google Drive or Dropbox

Files can be automatically copied from **USB flash drive**. If you connect your device to the local network via WiFi or Ethernet cable, you can also add new files through **FTP** or **WebDav**, from your browser via **web interface** or synchronized from your **Google Drive** or **Dropbox** folder.

Display time, weather and RSS news

Through the web interface of Slideshow, in addition to displaying files, you can add different panels to the screen: current **date and time**, **weather information** for next few days and **RSS news** for your favorite provider.

Setup screen layouts and playlists

Experiment with various **screen layouts** with overlapping zones and transparency. Setup different **playlists** for different parts of the day or different days of the week. All settings are accessible through the local web interface.

Music playback & internet radio streams

Play **music files** or internet **radio streams** as a background music for your presentation on screen, or turn your whole device into a **headless music player** for your business premises.

Interactive features

Set up **Face detection** to trigger customized content, add actions for keys on your **remote control** or for **screen click** in a particular zone, integrate with another device via **REST API** or **serial port** in order to bring interactivity to your digital signage screen.

Features listed are from the software developer. See the MICRO4PRO Manual for details.
